

SMARTDRY

Set Up (Android)

App Setup (Android)

Step 1: Go to the Google Play Store and Search for “SmartDry” and install the official SmartDry App

Step 2: Open the SmartDry App and “Allow Notifications”. Continue to follow the in App instructions.

Step 3: Pull the battery tab, tighten the screws and place your sensor in the dryer. The App will scan for the sensor ID or you can Enter the sensor name – 6 digit alpha numeric code found on the back of the sensor.

Step 4: The app will scan for the hub, when it is found, click on the hub name to continue.

Step 5: Verify your network name (2G) and enter your password.

Step 6: If setup is successful you will receive two notifications, one from the Hub and one from the sensor which indicates that the setup is complete.

Hardware Notes:

WIFI and Bluetooth must be enabled on the mobile device prior to starting a setup.

SmartDry will only connect to your 2.4Ghz WiFi.

For Best Results:

The SmartDry Hub should be plugged in within 10 feet of your clothes Dryer.

Position the magnetic sensor inside the dryer up against one of the internal paddles and roughly centered between front and back of dryer.

Testing SmartDry - With SmartDry installed, start your dryer. Open the App and after a few seconds you will see the dryer status updating.

Let the dryer run for 2-3 minutes. Stop the Dryer and you will get an alert that the dryer has stopped shortly after.

Using SmartDry:

SmartDry is very easy to use. Once installed, simply start the dryer and you will get your notifications automatically. You can open the App anytime to set and save other alerts or to see the dryer status.

The app can be closed at any time and you will be automatically alerted for each new load.

Just set it and forget it!

SMARTDRY

System Requirements:

- Android Phone with Lollipop 5.0 or newer
- SmartDry Free App
- 2.4GHz Wifi networks ONLY
(No 5G networks)
- SmartDry Sensor, SmartDry Hub, Sensor battery, and USB Power plug are all provided.

Troubleshooting

Hub Setup Fails:

If the hub fails to setup properly, unplug the hub. Then repeat the hub setup in the App.

Also verify you are connected to a 2.4G WiFi network and not a 5G network.

No Notifications / No updates on App:

Close the App completely and reopen the App. Make sure the sensor ID in the app match that of the sensor in the dryer (Case Sensitive).

Verify the Hub LED blinks while the dryer is moving (expect to blink every 3 to 10 seconds while it listens to the sensor). If not blinking while the dryer is running, follow the in app hub reset steps.

Where to Locate Your SmartDry Hub
